SUSTAINABLE TOURISM PLANNING FOR MARINE PROTECTED AREAS

PROJECT: CONTROL OF BAD PRACTICES IN TOURIST ATTRACTION SITES IN COIBA NP

Site: Colba National Park, Panama
Location: Montijo District, Veraguas Province, Panamá
Theme: Control of Poor practices in Tourist Attractions
Problem declaration/aspect: Poor practices of attractions by tourists to the area
in part due to the operators and the tourists and the tourist resources, which
affects the biodiversity of the sites.
Level of actual impact: □ acceptable x close to unacceptable □ unacceptable
Level of projected impact: x acceptable □ close to unacceptable □ unacceptable
Is there information on the level of impact? If yes, explain: Information of
the coral reef exists that indicates that it is affected by visitors. Also there
are high volumes of solid waste collected in the places of high visitor
volume. Monitoring has shown a drop in waste, but plastic material exists
in the park and monitoring of plasicts is not at an adequate level

If not, where can you obtain this information?

	ACTIVITY 1	ACTIVITY 2	ACTIVITY 3
Activity description	Identification of	Develpment of	Workshop
	operator activities	Capacity	occurrance in CNP
	within Coiba NP	Qualifications	(theory, practice)
Objetive	To obtain the		
	background and		
	qualifications of at		
	least 50% of the		
	operators identified		
	in the continental		
	coastal zone, in		
	order to diminish		
	the impacts caused		
	by tourism in the		
	marine protected		
	area.		
Responsable	Chief of the Park,		
person	Chief of the		
	Protected Area		
	Central level		
	Department of		
	Environment and		
	Culure and		
	Cleanliness		
	Production ANAM		

Outcomes (short, mid and long-term)	Medium time Outcomes Code of regulations for tourist operations of the users inside the PNC	
Products (short, mid and long-term)	Short term: Qualification manual. Design and program workshops; Mid-term: Agreements and procedure standards consulting with operators	
Thresholds of unacceptable impact	10 bags of solid remainders collected in terrestrial and marine ecosystems to the north monthly 3 monthly seizures of illegal extractions of park resources	
Impacts of interested parties	Impact to boat owners, guides, operators of diving and facilitators of services on the coast, with respect to transformation of its vision of conservation and good practices in the site visitation.	

Implementation partners NGO's with intervention in the area, local tourism companies, Panamanian Tourism (IPAT), Panamas Project for Cleanliness (ANAM) Resource for Services in IPAT Species, ANAM and local Non-governmental Organizations (NGO's). Budget approximately \$7,500 USD Performance 60% reduction of rights to bycatch harvesting in the park visitation. Illegal poaching does not occur in the park. Implementation 1st semester of 2007	Impacts on community	The community benefits by using good environmental practices, integrating itself in the management protection of the park.
